

Best Printers Maintenance TEST Sheet

BestPrinters

Black

Magenta

Cyan

Yellow

General Instruction

Section 1: Weekly Maintenance (Infrequent Use)

- Print the maintenance sheet once per week if the printer is used infrequently.
- Run all color pages—Black, Cyan, Magenta, and Yellow—to circulate each ink channel.
- Confirm each color prints evenly to maintain proper ink flow.

Section 2: Print Quality Testing

- Use the maintenance sheet when print quality declines (fading, streaking, or missing colors).
- Print individual color pages to identify which ink channel is affected.
- Compare results to determine whether Black, Cyan, Magenta, or Yellow output is compromised.

Section 3: Targeted Color Recovery & Clog Prevention

- If a specific color is not printing, run that color's page repeatedly to help restore ink flow.
- Continue printing the affected color page until output returns consistently.
- Once restored, run the full color set to stabilize performance and help prevent future clogs.
